

How to setup your computer to connect to SDNP server using Dial up Networking

This document is subject to change because of the variety of Windows 95/98 versions and new operating system. If you have any problems with these instructions or would like to see changes, please call +880-2-8126204 or mail to support@sdnbd.org

This document is divided into 10 major sections:

- I. Introduction
- II. Verifying that a modem is installed and is operating correctly
- III. Verifying that dial-up networking is installed
- IV. Installing dial-up networking
- V. Configuring dial-up networking
- VI. Going online
- VII. Using Internet Explorer
- VIII. How to download Software from SDNP.
- IX. Configuring Netscape Communicator to read your e-mail from SDNP.
- X. Configuring Eudora 4.x to read your e-mail from SDNP

I. Introduction

This document explains the procedure for setting up PCs that run Windows 95 and Windows 98 so that, using Windows 95/98's Dial-up Networking features, they can connect to the Internet via Dial up Networking Connection to SDNP. These instructions will not work for Macintosh or other operating system. If you have another operating system, you may have to purchase or download a third-party software solution.

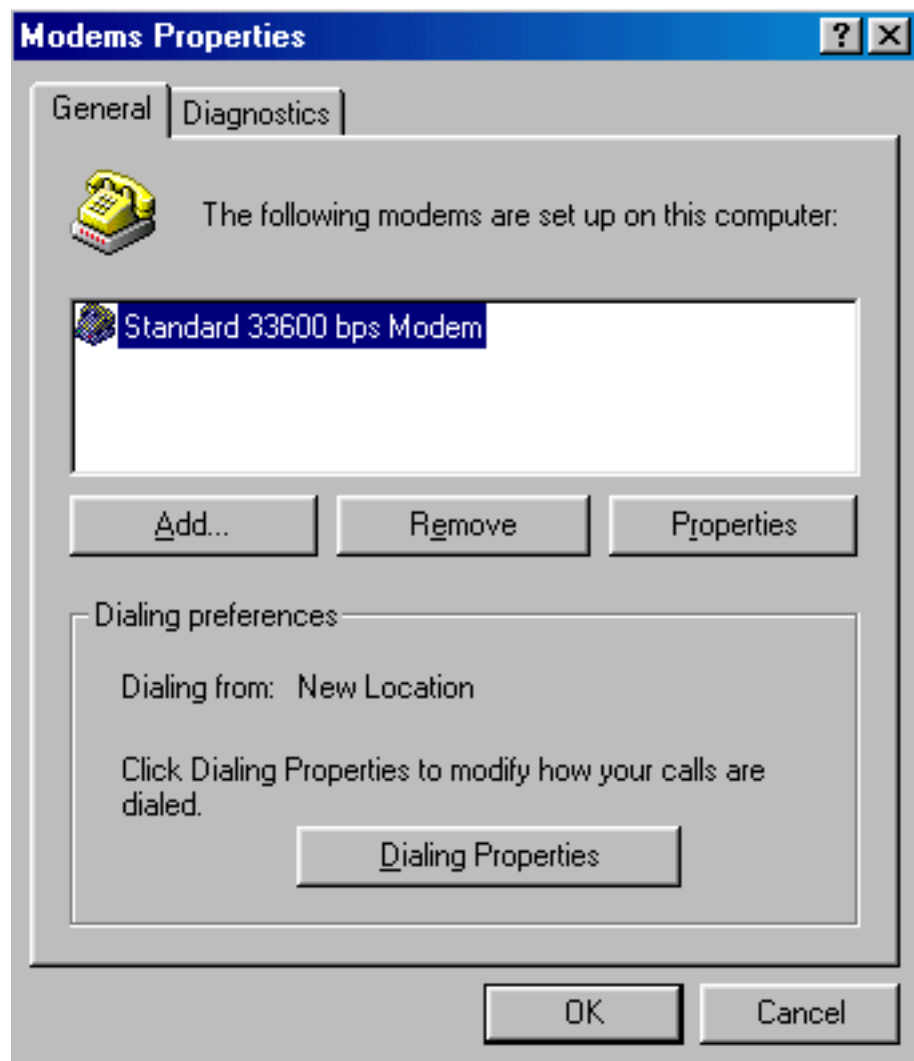

Keep in mind that it is impossible for this document to account for all possible configurations of Windows 95/98. Not all of the windows and settings described here may be applicable to your copy of Windows 95/98. If you have any Internet account running properly to other Internet Service Provider please jump to step V.

II. Verifying that a modem is installed and is operating correctly

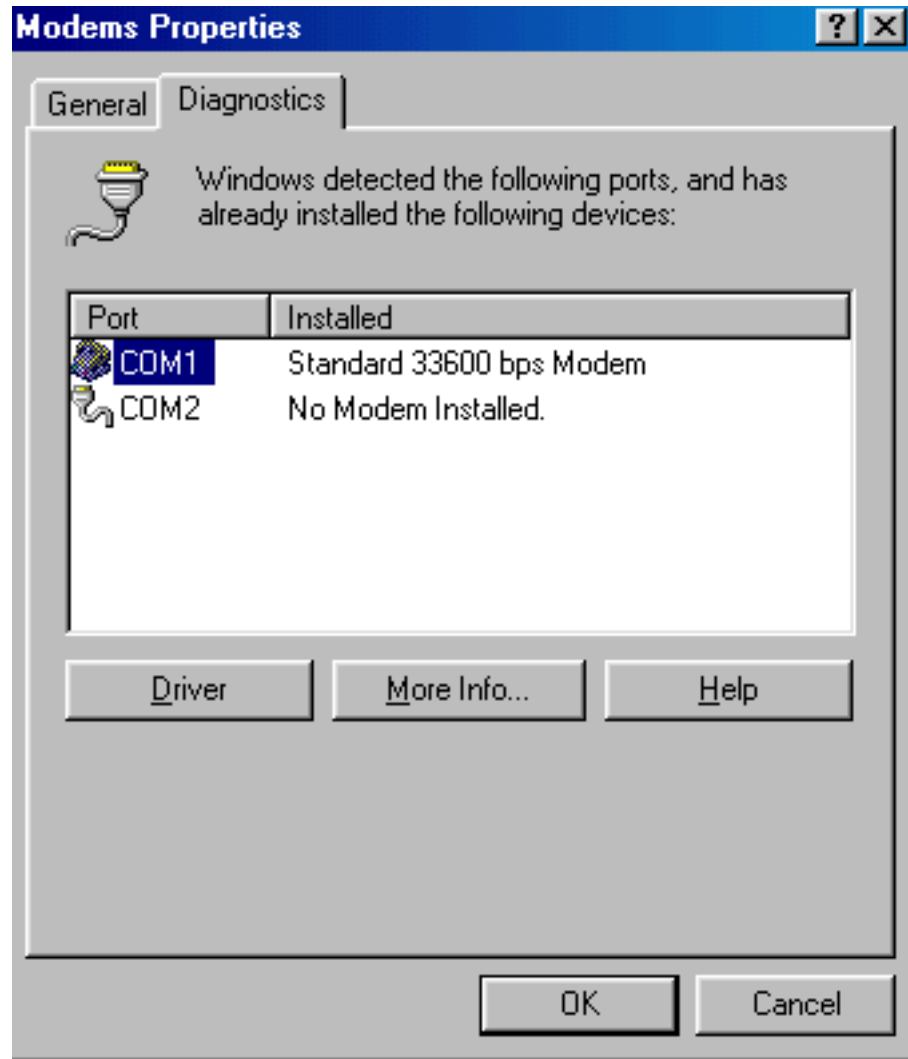

PLEASE NOTE: Close all windows and applications before going any further.

In order to go any further, you will need a working modem correctly installed in your machine. The following steps determine whether or not you do; however, if you are sure that your modem is installed and working properly, you may skip to the next section.

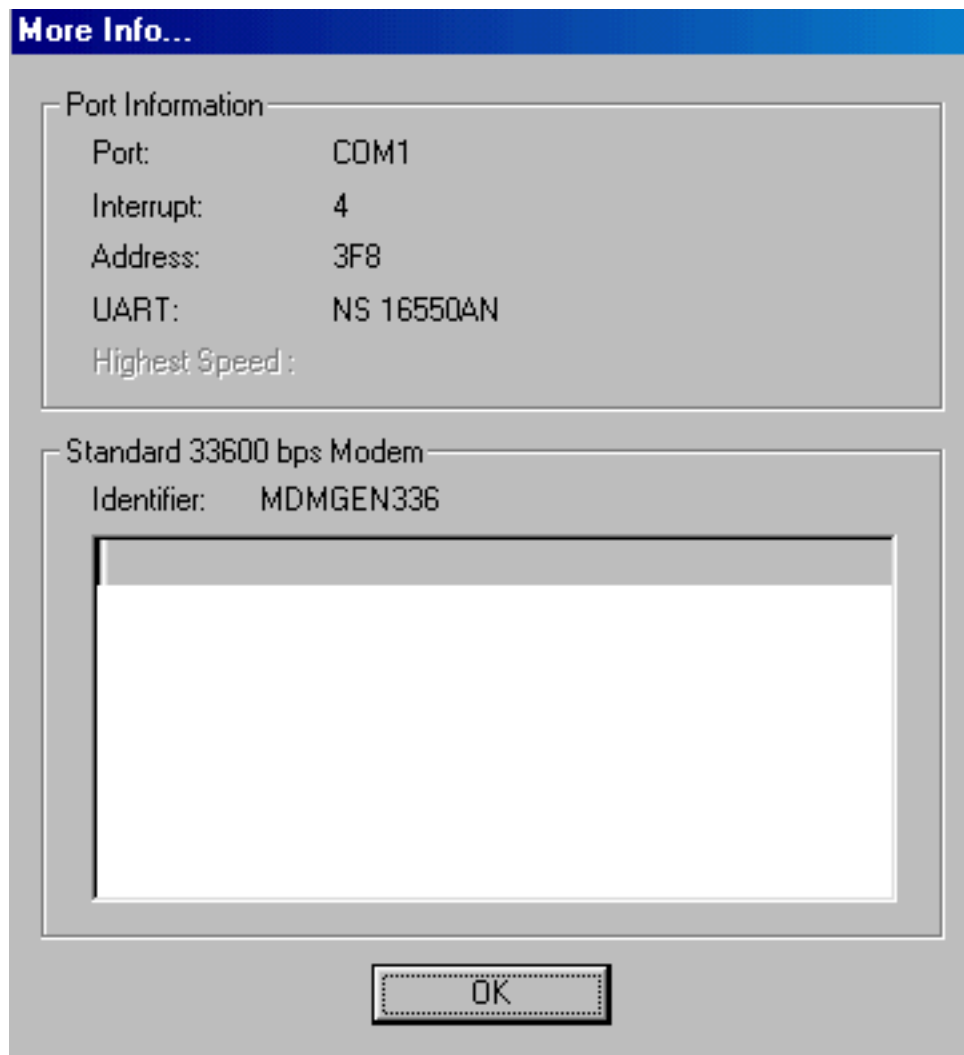

1. Click the *Start* button.
2. Click *Settings*.
3. Click *Control Panel*.
4. **Double-click** *Modems*. If you are presented with a window that asks you to begin modem installation, you do not have a modem installed. In this case, please **click** *Cancel* and proceed to install one according to its manufacturer's recommendations. Once that is completed, you should follow these instructions again from the beginning.

5. In the *Modems Properties* window, **click** the *Diagnostics* tab.
6. **Click** on the port (COM1, COM2, etc.) to which your modem is connected.
7. **Click** the *More Info* button

After a short wait, you should see a new window with all the information about your modem displayed.

If you do not see such a window, then your modem is not installed correctly and you cannot proceed. Please **reinstall** the modem and/or its drivers according to its manufacturer's recommendations. Once that is completed, you should **follow** these instructions again from the beginning.

8. Click *OK*.
9. Click *OK* again.

III. Verifying that dial-up networking is installed

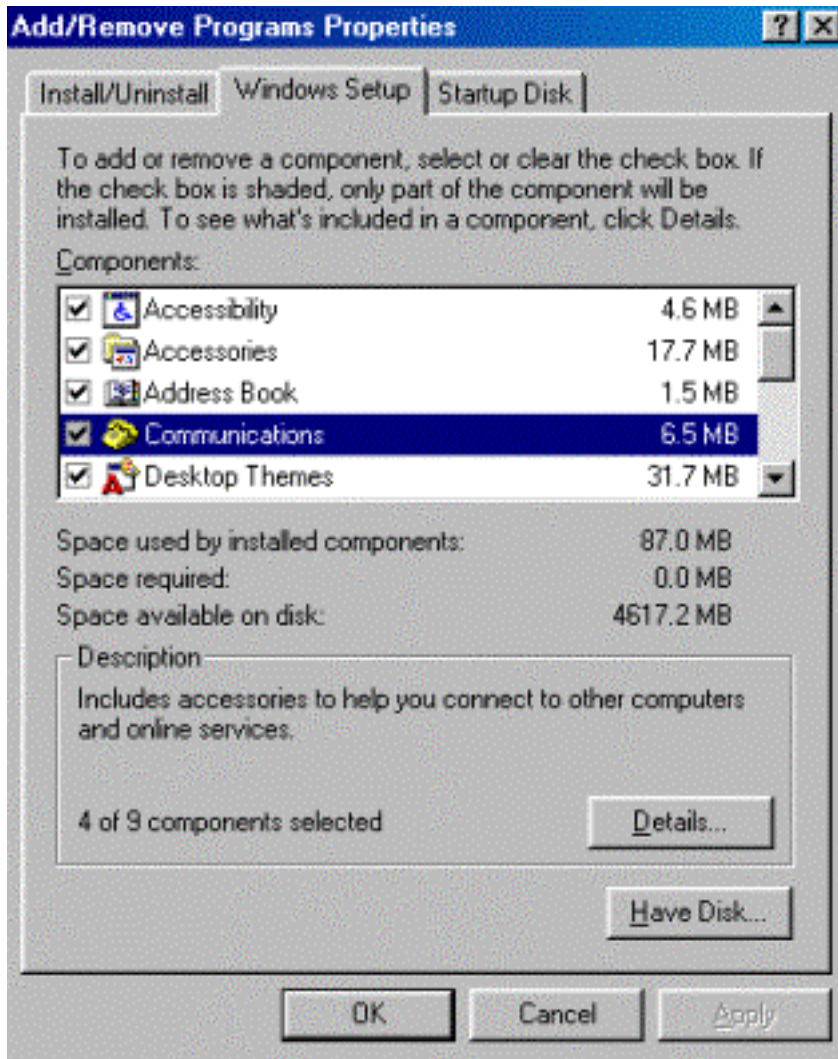

The steps in this section verify that Windows 95/98's Dial-up Adapter is installed.

1. On the desktop, **Double-click** on the *My Computer* icon
2. If there is a folder in the *My Computer* window named *Dial-up Networking*, then Dial-up Networking is installed and you can skip to Section V, "Configuring Dial-up networking." If there is no such folder, then proceed to the following section.

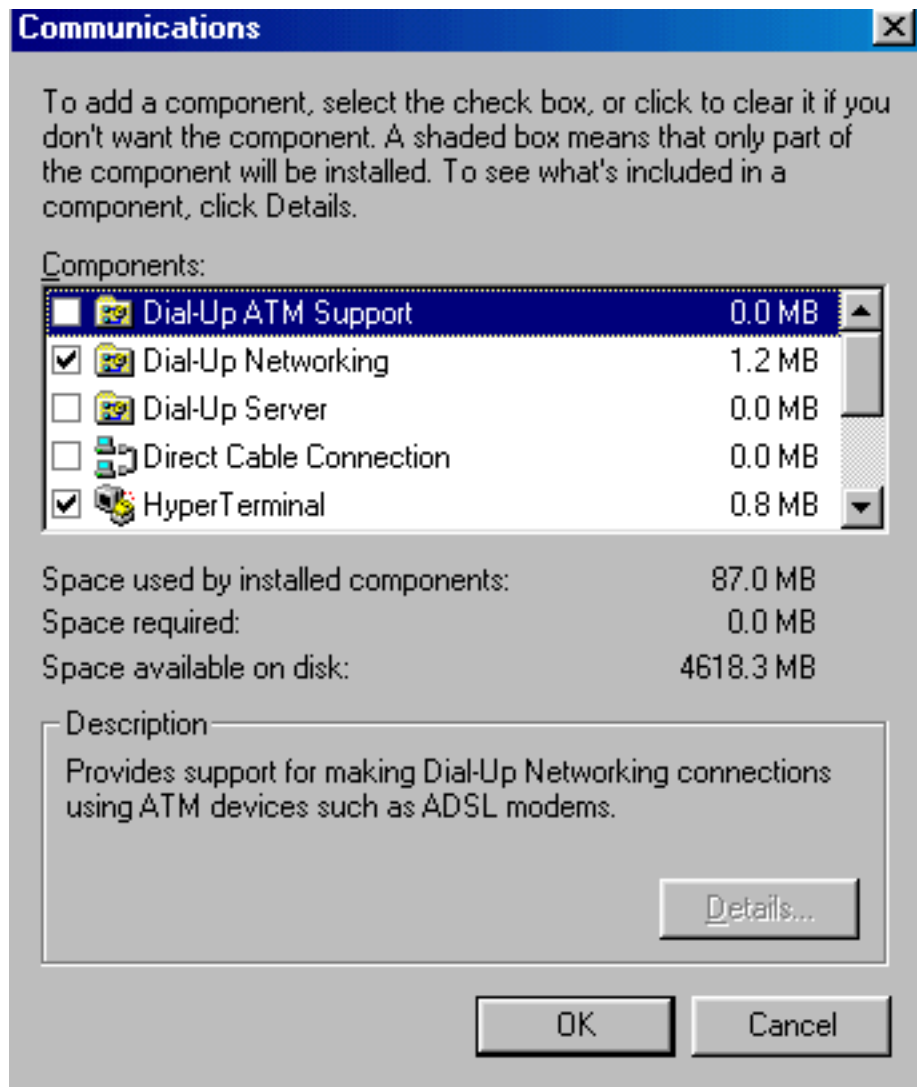

IV. Installing dial-up networking

1. **Double-click** the *My Computer* icon.
2. **Double-click** the *Control Panel* icon.
3. In the *Control Panel* window, **double-click** the *Add/Remove Programs* icon.
4. In the *Add Remove Program Properties* window, **click** the *Windows Setup* tab. **Double-click** *Communications*.

5. In the *Communications* window, click once in the checkbox beside *Dial-up Networking*. It should now show a checkmark in it..

6. Click *OK*

7. In the *Add Remove Program Properties* window, click *OK* again. Windows will begin installing the Dial-up Networking software now. If you do not have Windows 95/98 copied on hard drive, you will be prompted to insert CD. If you are asked to restart your computer, choose *NO*. In some cases, you will not be prompted for any form of CD or diskette.

V. Configuring dial-up networking

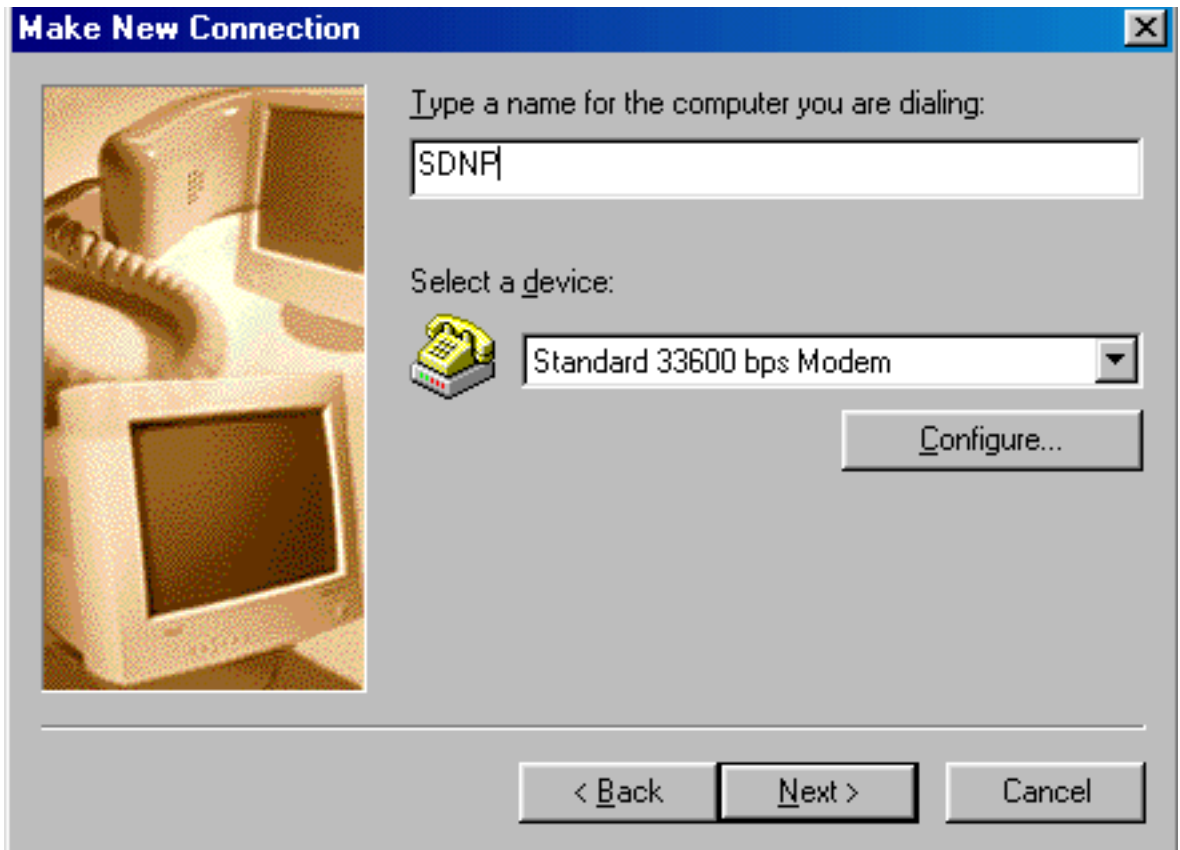

1. Double-click the *My Computer* icon on your desktop.

2. Double-click on the *Dial-Up Networking* icon.

3. If you are automatically prompted to make a new connection, click *Next*. If you only see the *Dial-Up Networking* window with one or more icons in it, double-click on the *Make New Connection* icon.

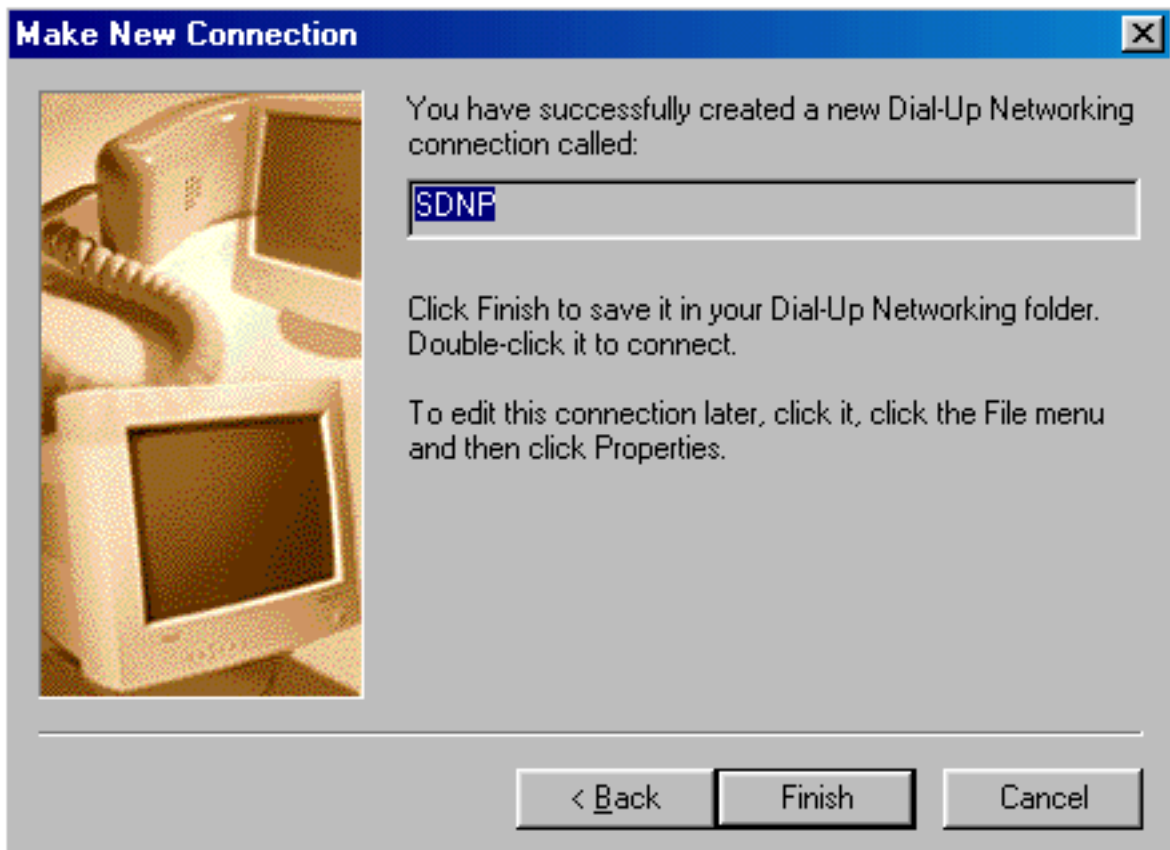

4. In the *Make a New Connection* screen, at the *Type a name...* dialog, **type "SDNP"** (without the quotation marks).
5. Click *Next*.

6. In *Telephone Number* dialog, enter 9133662.

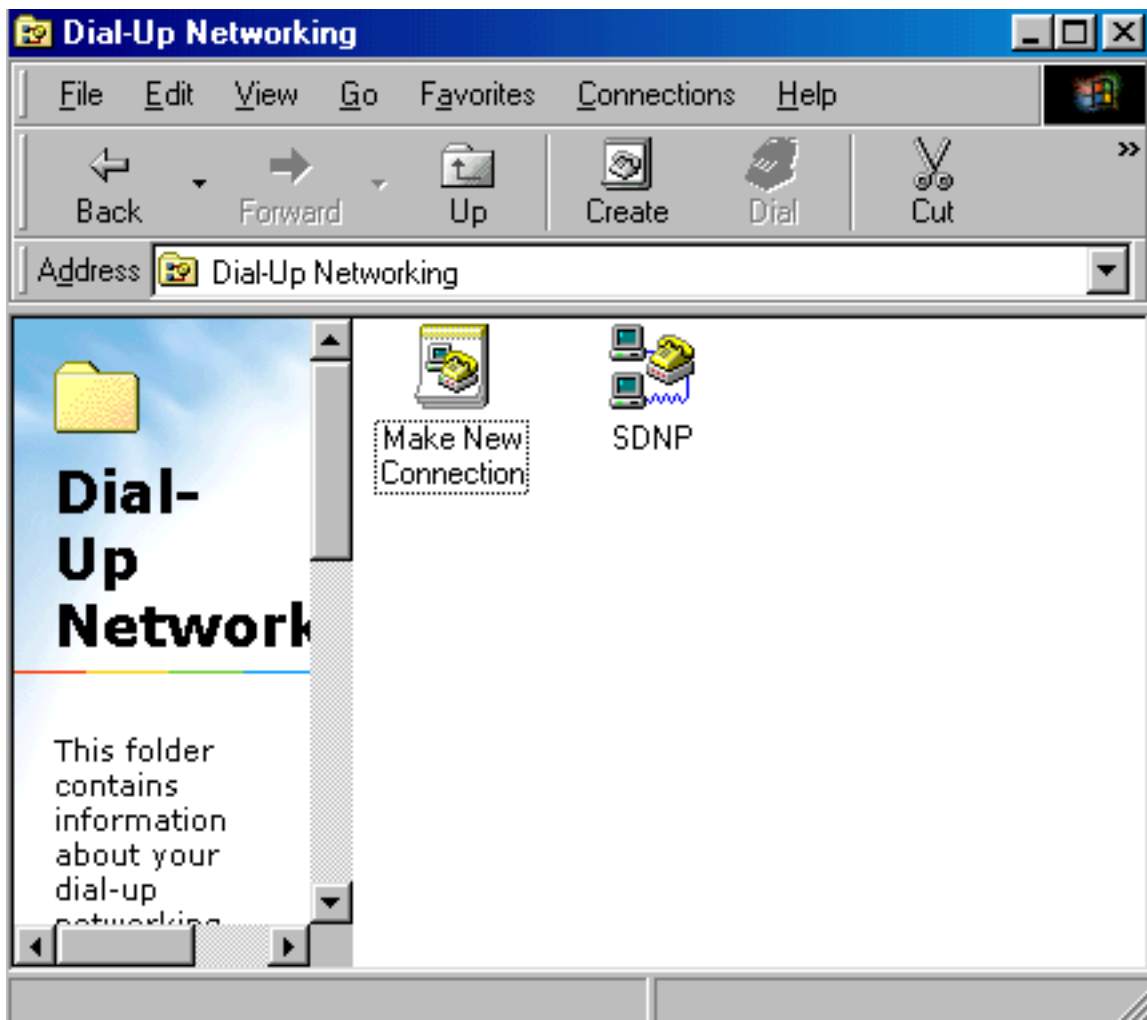

7. Click *Next*

8. Click *Finish*.

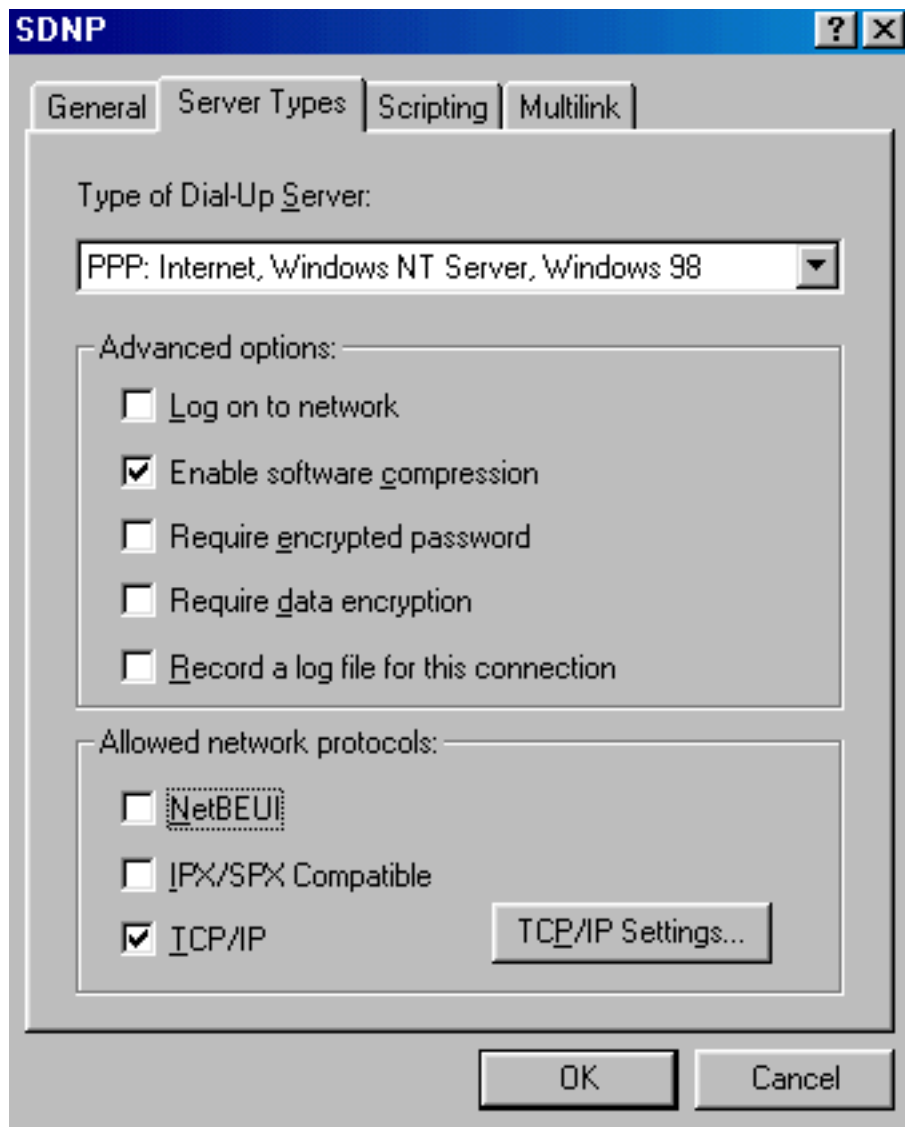

9. In the *Dial Up Networking* window, **right-click** on the *SDNP* icon.

10. Click on *Properties* in the menu that appears.

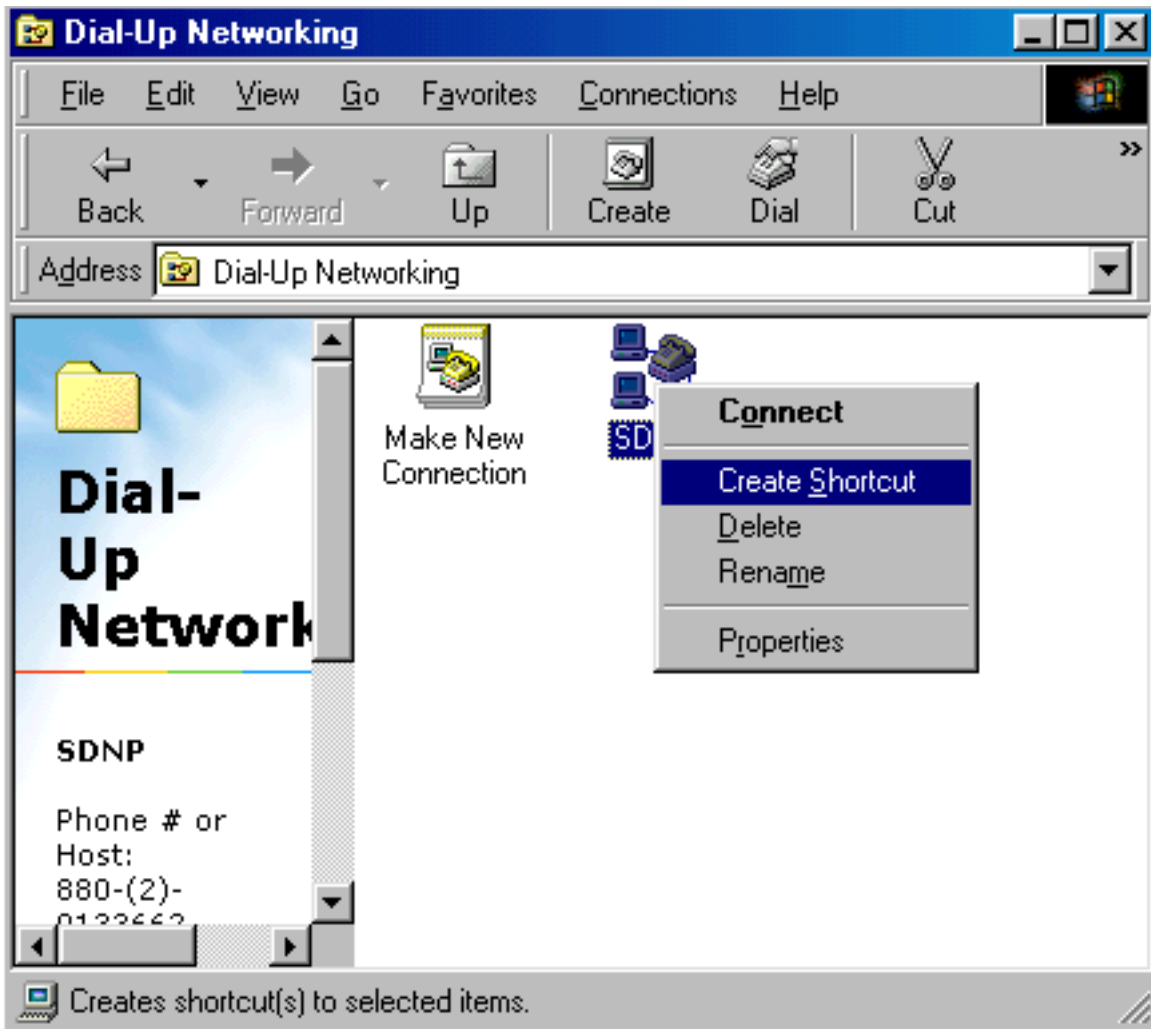

11. In the window labeled *Server Types*, click on the tab at the top or (on some Windows 95/98 systems) click on the button at the bottom.

12. **MAKE SURE** that only the boxes beside *Enable Software Compression* and *TCP/IP* are checked. Uncheck all others.

13. In the *Dial Up Networking Window*:

- i. **Right-click** on the *SDNP* icon.
- ii. **Choose** *Create Shortcut*.
- iii. At the error message that says that the "shortcut cannot be created here...," **click** Yes.

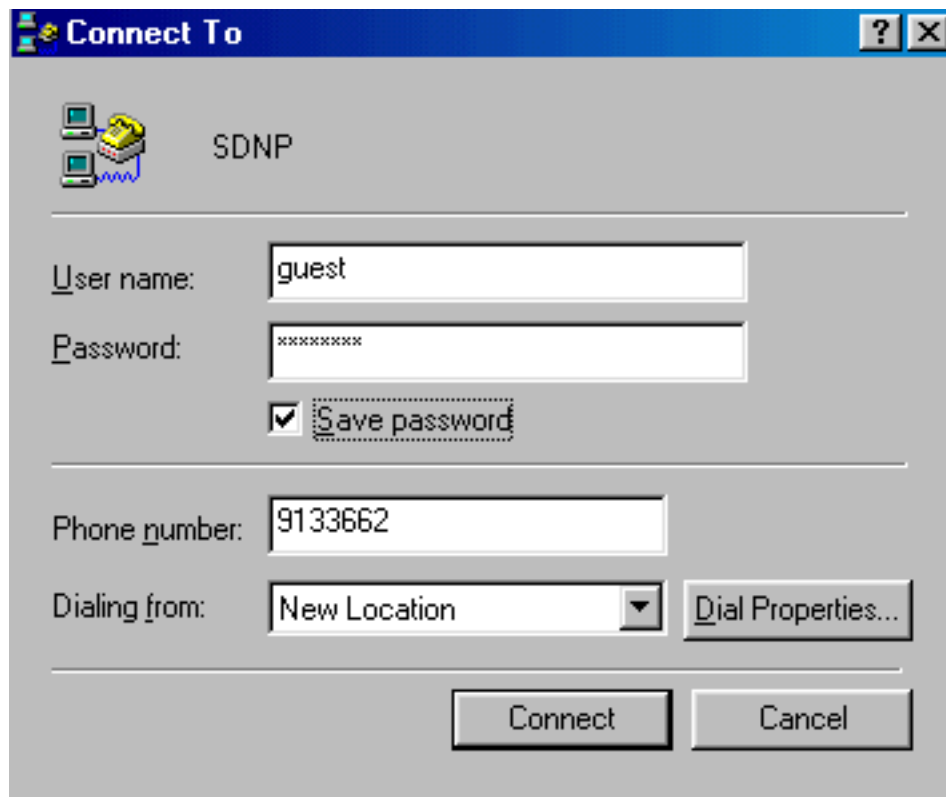

14. Close all open windows by **clicking** the X button in their upper right-hand corner.

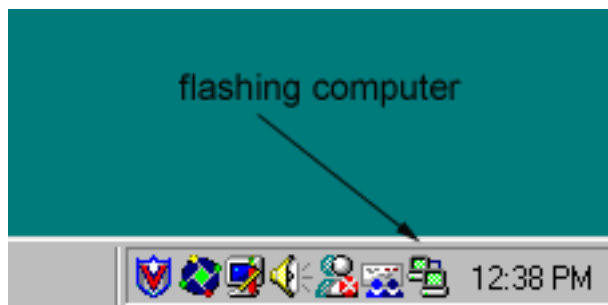

VI. Going online

1. **Double-click** the shortcut of *SDNP* icon on the desktop.
2. In the *Connect to:* screen, **enter** your username and your password. If you don't want to have to re-enter your password each time you go online, **check** the *Save Password* checkbox.

PLEASE NOTE: Be sure your username is entered in lowercase form. Verify that your password is entered correctly, keeping in mind that UNIX, the environment in which these actions are processed, is case-sensitive.

3. **Click *Connect*.** If an error message appears that refers to password rejection or disconnection of your session, which may be caused by an incorrect password or login.
4. Shortly, you should see a *call duration* or a *connected to SDNP* window. This means you have successfully connected to the Internet, and you are ready to run a client program, such as an e-mail program or Web browser. This window should minimize automatically. If not, you may minimize it manually. Once connected, you should see a "flashing computer" icon in the Windows Task bar (near the clock in the lower right corner of your screen). You can click on this icon to check your online status and to disconnect.

5. If you do not see the aforementioned window and/or get an error message stating that something is not configured properly, go back through these instructions to make sure you haven't missed anything or done something incorrectly.

6. When you are finished using the Internet, and you wish to disconnect and to free the telephone line, **double click** the flashing computer icon in the Windows Task bar, then **click** the *Disconnect* button in the *Connection to SDNP* window.

VII. Using Internet Explorer

Windows 95/98 comes with a Web browser called Microsoft Internet Explorer. To use it, click the  icon on the desktop (if its on the desktop) if not follow these steps:

1. **Click** the *Start* button on the task bar.
2. **Click** *Run*.
3. **Type** "iexplore" (without the quotation marks) and **press** *Enter*. This will launch Internet Explorer.

If this was successful, then you may follow the next steps to create a shortcut to your desktop.

4. **Click** on the *Start* button.
5. **Click** on *Find*.
6. **Click** on *files or folders*.
7. In the "named" field, **type** "iexplore" (without the quotation marks). In the "Look in" field, make sure "c:" is displayed. If it is not, **click** on the *pull down menu* to locate "c:".
8. Make sure there is a check mark in the box beside "Include subfolders."
9. **Click** *Find Now*.
10. You will see several files named "iexplore." **Right-click** on the *iexplore* icon where "Application" is listed in the Type Column (to the right).
11. **Click** on *Create Shortcut*.

When the error message appears, saying "windows cannot create a shortcut...", **click** *Yes*. Windows will place a shortcut on the desktop.

Once the program launches, you will probably be taken to Microsoft's homepage. To go to another page, **click** in the *Address* field near the top of the window and **type** the URL to which you wish to go (for instance, "www.sdnbd.org"). You may also **click** on a link to go to a new page (a link is indicated when the mouse pointer turns into a pointing finger). To go back to a previous page, **click** the *Back* button. To go forward again after using the *Back* button, **click** the *Forward* button.

VIII. How to download software and antivirus program from our site.

To download any software (like Netscape, mcafee upgrade...) please go to the address below

<http://bids.sdnbd.org> and follow the appropriate links on that site.

X. Configuring Netscape Communicator (version 4.xx) to read your e-mail from SDNP

Netscape Communicator's mail reader can be used to read your e-mail from SDNP. The following steps explain how to configure Netscape Communicator 4.xx's mail client to retrieve your mail from SDNP so that you can read it in a "point and click" environment.

Please note that these instructions do not work for any version of Netscape Navigator.

1. Make sure that you are connected to the Internet and that Netscape is running.
2. On Netscape's menu bar, **click** *Edit*.
3. **Click** *Preferences*.
4. **Double-click** on *Mail & Groups*.
5. **Click** on *Identity*.
6. In the *Your Name* field, **type** your real full name.
7. In the *e-mail address* field, **type** "guest@sdnbd.org" (without the quotation marks) being sure to replace "guest" with your *Login ID*.
8. In the *Reply to Address* field, **type** guest@sdnbd.org
9. **Click** on *Mail Server*.
10. In the *Mail Server User Name* field, **type** your *Login ID* (e.g., "guest").

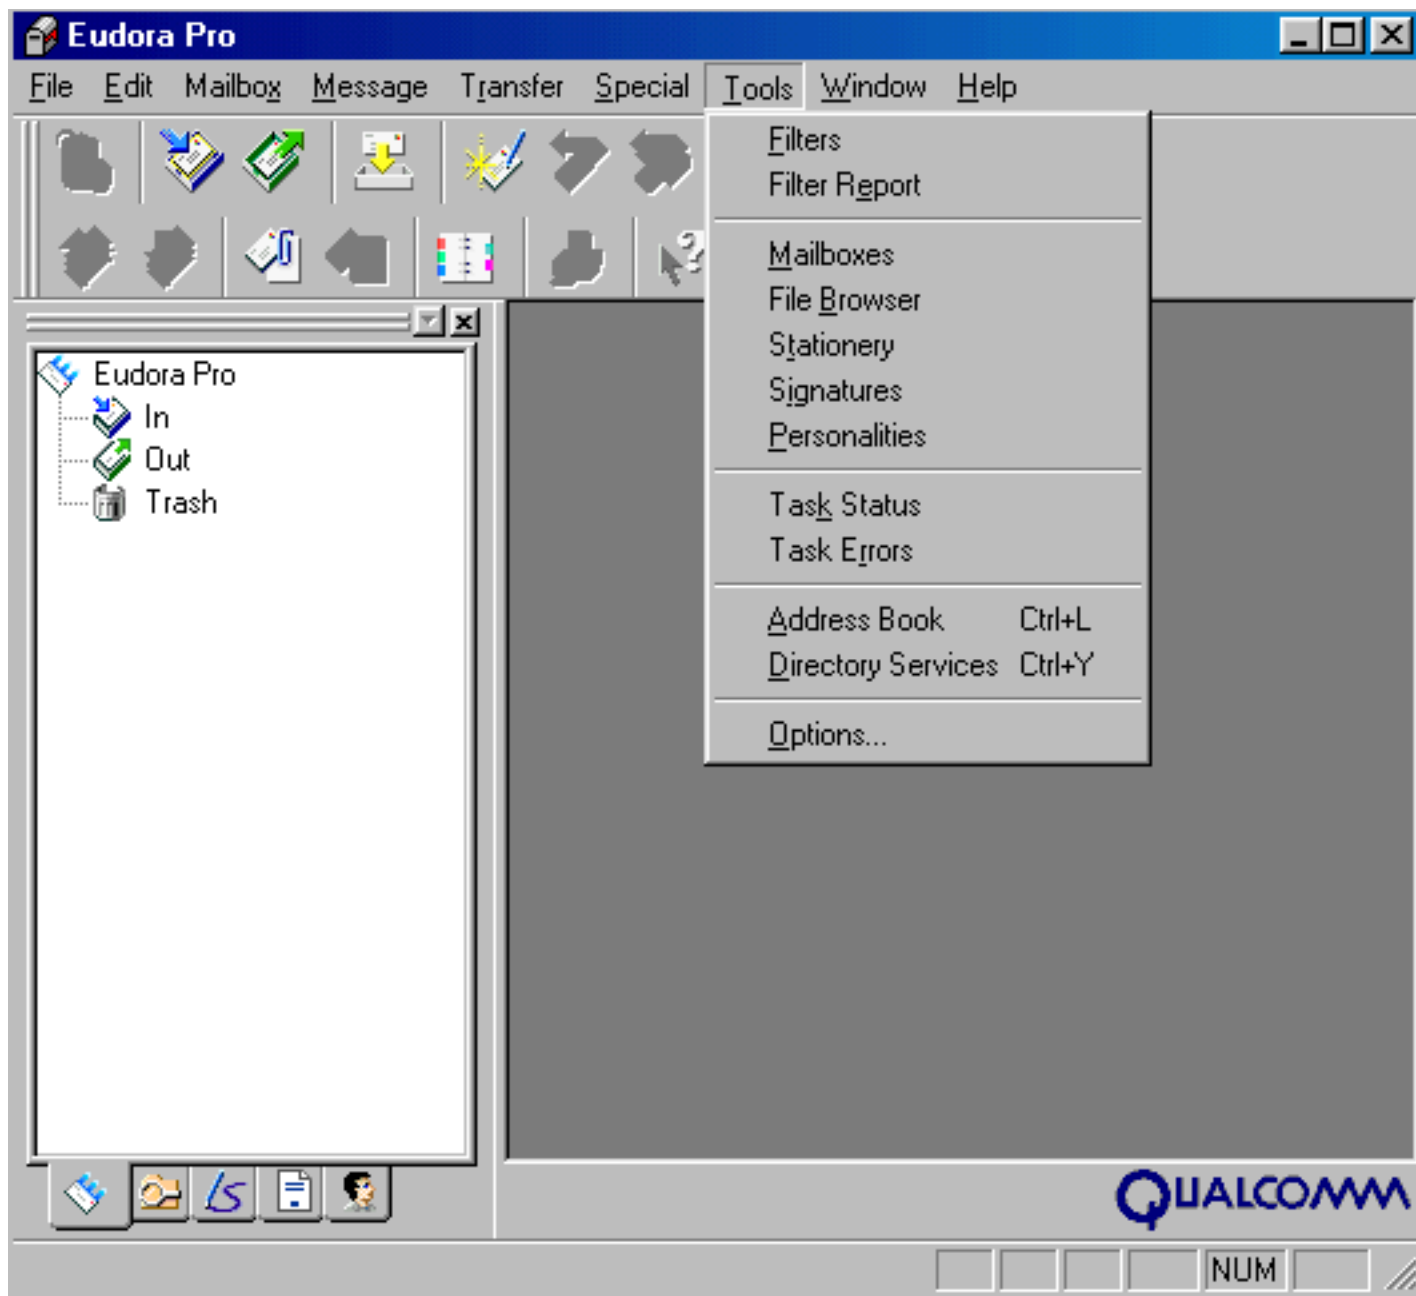

11. In the *Outgoing Mail Server* field, **type** "mail.sdnbd.org" (without the quotation marks).
12. In the *Incoming Mail Server* field, **type** "mail.sdnbd.org" (without the quotation marks).
13. **Uncheck** the box beside the field *Leave messages on server...*
14. Note: Steps 10 through 13 may vary depending on your version of Communicator. If your version is more recent, follow steps 16 through 20 instead.
15. In the *Incoming Mail Servers* section **click** on *Add*.
16. On the General tab **type** "mail.sdnbd.org" (without the quotation marks) in the *Server Name* field.
17. **Make sure** that *POP3 Server* is selected beside *Server Type*.
18. **Enter** your SDNP login id in the *User Name* field.
19. On the POP tab **make sure** there is *NO checkmark* beside *Leave messages on server*.

XI. Configuring Eudora to read your e-mail from SDNP

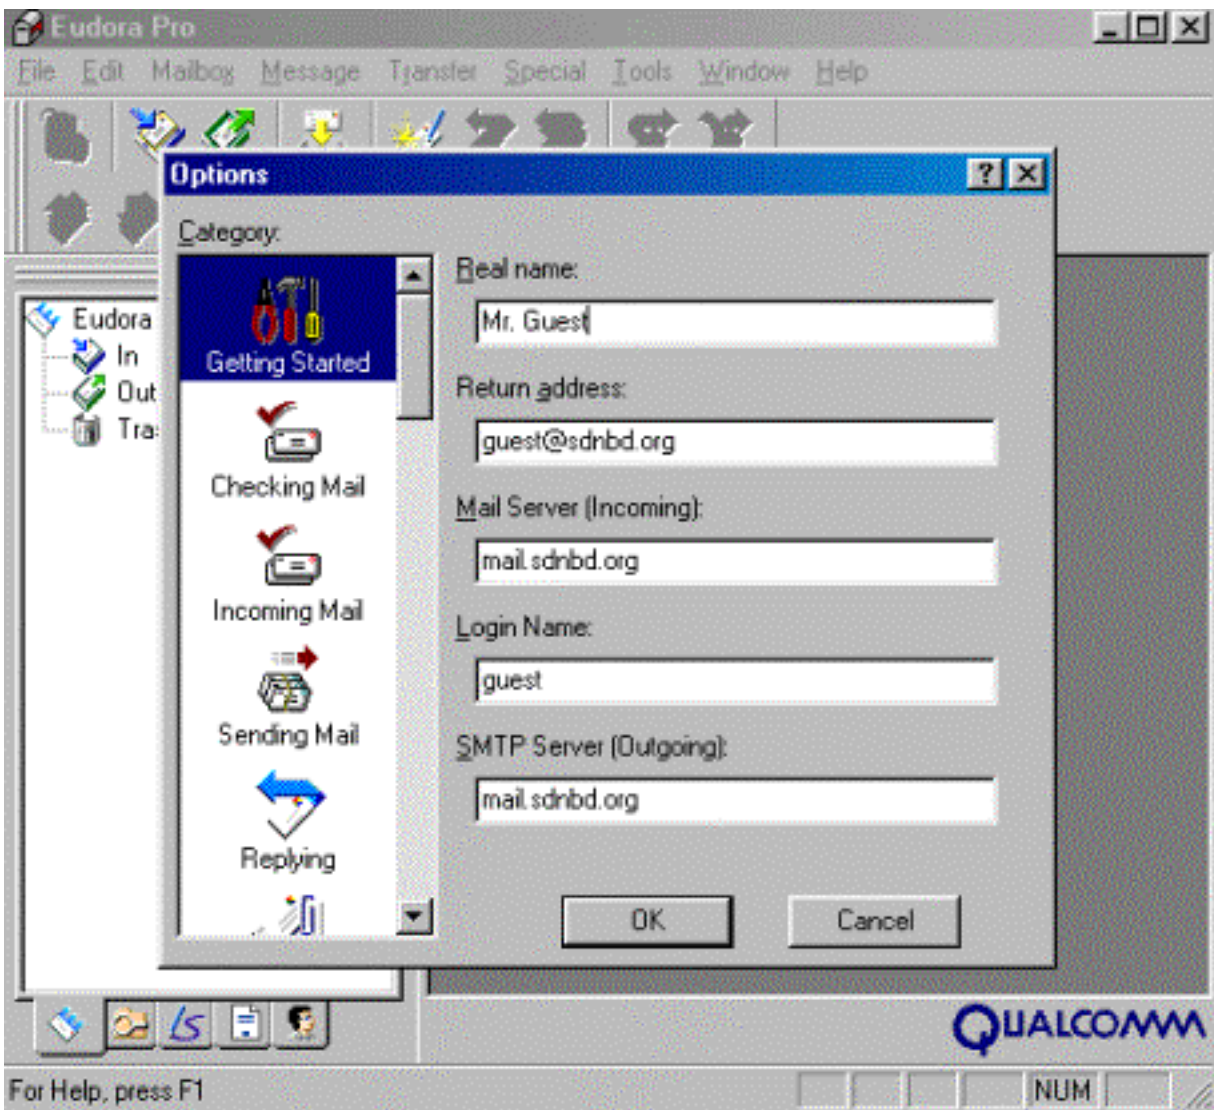

Eudora mail reader can be used to read your e-mail from SDNP. The following steps explain how to configure Eudora mail client to retrieve your mail from SDNP so that you can read it in a "point and click" environment.

Please note that these instructions work for Eudora 4.x and above.

1. Make sure that you are connected to the Internet and that Eudora is running.
2. On Eudora's menu bar, **click** Tools
3. **Click** Options.

4. In the *Your Name* field, **type** your real full name.
5. In the *return address* field, **type** "guest@sdnbd.org" (without the quotation marks) being sure to replace "guest" with your *Login ID*.
6. In the *Mail Server(incoming)*, **type** "mail.sdnbd.org" (without the quotation marks).
7. In the *login name*, **type** your *Login ID* (e.g., "guest").
8. In the *smtp server (Outgoing Mail Server)* field, **type** "mail.sdnbd.org" (without the quotation marks).

9. In the same option bar click on *Sending Mail* and **uncheck** *Immediate send* and **check** send on check.
